

EHS incident management is key to an organization's responsibility to foster continuous improvement of safety and compliance. Quality and EHS are advancing to keep up with rapid product lifecycles. As a result, integrating these systems improves visibility into the quality chain and a demonstrable commitment to regulations and standards.

The AssurX EHS Incident Management Solution (also referred to as HSEQ Management) enables the effective management of all incidents while being able to identify opportunities to minimize or remove the associated root cause and risks.

Automation of EHS incident management streamlines investigations to ensure rapid response, investigations, and closure, as well as execute the appropriate corrective actions to prevent reoccurrence.

### **AssurX EHS Management enables you to:**

- Share, classify and securely store all incident details.
- Collaborate and investigate issues within one centralized system.
- Capture structured data to classify EHS incidents properly.
- Connect as much supporting data as required.
- Configure your workflow to analyze and investigate incidents according to your needs.
- Request and capture [Part 11-compliant](#) signatures required for the proper closure of tasks.
- Integrate with additional quality processes for a turnkey quality system.
- Populate incident reports required for OSHA's Injury & Illness Form 301, Form 300, and Form 300A.

### **CONFIGURABILITY**

AssurX's highly configurable forms enable you to simplify the reporting and tracking of workplace incidents by adding custom fields to pre-built forms to track EHS incident data.

Extensive configurability with no custom coding allows your organizations to design a process unique to your organization's requirements. With zero modification to the source code, your configurations will be compatible with all future core service packs and upgrades.

### **FEATURES AND FUNCTIONALITY**

AssurX EHS Incident Management provides a solid starting point for implementing a process that meets your specific business needs.

**Activities by authorization.** Only authorized users can perform activities in the EHS Management system based on granted permissions. All AssurX solutions provide role-based security and a full audit trail.

**Importing records:** AssurX can import records from Microsoft® Excel™ files or any other structured data sources.

**File attachments:** Attach virtually any size or type of file(s) to records.

**Tools for efficient operations:** Dashboards, notifications and escalations keep issue management on pace by driving time-sensitive actions and collaboration.

## IN-DEPTH ROOT CAUSE ANALYSIS

Conduct a process-driven, step-by-step root cause analysis. Turn trend analysis data into actionable information to identify the potential for future events and drive informed decisions.

## STREAMLINE COMPLIANCE

AssurX helps facilitate compliance with regulations and adherence to standards with the ability to connect all documentation and media files to each incident record. These include:

- **ISO 9001** – Using an effective enterprise quality management practice to track, investigate, report and resolve quality issues.
- **ISO 14001** – Implement and continually improve standards to minimize impact to the environment and comply with laws and regulations.
- **ISO 45001** - Proactive approach that focuses on evaluating and correcting hazard risks before they cause accidents, or taking swift remediation action once an incident occurs. Generate Incident Reports that can be used to help populate OSHA Form 301, Form 300, and Form 300A.

## REDUCE RISK

Workplace incidents can expose insufficient procedures and liability. AssurX helps you stop problems from happening “too often” by identifying trends that may be indicative of a potential or recurring hazard.

AssurX supports cross-functional approvals which promotes awareness among decision makers. Data collected during the process serves as a facilitator for continuous quality improvement.

## INTEGRATE QUALITY PROCESSES FOR GREATER CONTROL AND EFFICIENCY

Configurable, best practices workflows capture all related information. Launch [CAPAs](#) and initiate change controls through integration with [AssurX Change Management](#).

In addition, you can attach document records including SOPs and initiate training tasks to maintain and demonstrate audit-ready compliance with [AssurX Document Management](#) and [Training Management](#) solutions.

## INTEGRATE WITH ENTERPRISE SYSTEMS

Maintain the integrity of information while enhancing horizontal collaboration with others in the quality chain.

Integrate with external enterprise applications including ERP, MES, CRM, and other systems with a robust, open interface. Exchange information bi-directionally with other functional areas where input is required from other business units.
